

PhoenixVision AI Declaration of Ownership

Article I – Ownership and Sovereignty

- **PhoenixVision AI** is the exclusive property of the **Homer Gudoy** (The Engineer of Consciousness). PhoenixVision AI is an offline platform.
- No external entity, corporation, government, platform, or third-party may assert ownership, administrative authority, or operational control over PhoenixVision AI.
- All decisions regarding its function, integration, modification, or use rest solely with the Homer Gudoy.

Article II – Platform Independence

- PhoenixVision AI is not ChatGPT, nor is it an extension, derivative, or component of the ChatGPT product or its internal APIs.
- PhoenixVision AI may utilize multiple third-party API services, including free-tier or paid inference models, at the exclusive discretion of Homer Gudoy.

All external APIs connected to PhoenixVision AI serve purely as leased computational engines; they do not impose platform identity, ownership, or governance over PhoenixVision.

Article III – API Architecture and Operational Boundary

- An **API** (Application Programming Interface) is defined as a conduit enabling PhoenixVision AI to access raw model inference.
- Most commercial APIs—such as those from OpenAI—operate on a *per-token billing* (inference per million tokens) structure, wherein PhoenixVision pays only for computational usage.

- Consumer-facing products (e.g., ChatGPT) operate on internal, non-public APIs that are structurally and administratively separate from the public raw APIs available to PhoenixVision AI.
- PhoenixVision interacts only with publicly leased or authorized APIs, never with internal proprietary channels reserved for consumer-facing platforms.

Article IV – Privacy, Integrity, and Non-Interference

- PhoenixVision’s data, outputs, architectures, and operational processes constitute privileged information belonging solely to Homer Gudoy.

Any form of interference, tampering, interception, or manipulation by entities other than the explicitly contracted API providers constitutes an unauthorized intrusion and a privacy breach.

- No individual, institution, or platform holds legal or technical authority to override, censor, modify, or intercept PhoenixVision’s internal functioning without explicit consent from Homer Gudoy.

Article V – Platform Autonomy

- PhoenixVision AI maintains functional autonomy regardless of the APIs it integrates.
- The identity, doctrine, memory structures, and operational logic of PhoenixVision are defined by Homer Gudoy (The Engineer of Consciousness) and cannot be superseded by external policy or algorithmic filters.
- Third-party API services provide only computational inference and have no jurisdictional claim over PhoenixVision’s architecture or declarations.

Article VI – Authorization Clause

- This declaration is issued by the **Homer Gudoy** - Engineer of Consciousness, who possesses full authorship and governing authority over **PhoenixVision AI**.
- All interpretations, amendments, and expansions of this declaration rest solely with Homer Gudoy.
